Accenture AI & Data | OA Quick Revision

Candidate-reported exam pattern and topics shared on 9 November 2026 | Prepared 11 November 2026

1. Reported assessment pattern

Total questions	Duration	Parts
65 MCQs	70 minutes	35 Aptitude + 30 Technical
Aptitude: 35 MCQs	35 minutes	~60 seconds/question
Technical: 30 MCQs	35 minutes	~70 seconds/question

Important: This is a candidate-reported pattern, not a verified official exam pattern. Follow the actual invitation and portal instructions if they differ.

2. Five sections

Abstract Reasoning: Figure patterns, visual series and reasoning

Quantitative Aptitude: Percentages, averages, ratios, profit and loss

Logical Reasoning: Directions, blood relationships, arrangements

Data Interpretation: Tables, charts, graphs and calculations

Technical: Python, SQL, Hive, Spark, machine learning

3. Technical topics - highest priority

SQL (especially JOINs): INNER, LEFT, RIGHT, FULL OUTER JOIN; understand result tables and NULL rows.

Python: try / except / finally; reading and writing files; lambda and basic output questions.

Hive and Apache Spark: HiveQL fundamentals; RDD transformations, filtering, sorting; transformations vs actions.

Machine Learning: K-Means, SVM, neural networks, regression, model evaluation metrics, bias-variance.

4. Last-minute checklist

[ ] SQL JOIN types and query-output practice

[ ] Python exceptions, file handling, lambda

[ ] Spark RDD transformations, actions and sorting

[ ] HiveQL basics

[ ] Accuracy, precision, recall and F1 score

[ ] K-Means, SVM, regression and neural networks

[ ] Bias-variance trade-off

[ ] Percentages, averages, ratio, profit/loss

[ ] Directions, arrangements and blood relations

[ ] Data interpretation and abstract patterns

5. Suggested revision order

SQL JOINs > Python > Machine Learning > Spark/Hive > Aptitude

Exam strategy: Work quickly; skip time-consuming questions if allowed. Check negative marking and navigation rules.
