Accenture Elite Technology Engineer — IIT Dhanbad

Reconstructed OA & Communication Round Structure

Stage	Structure / Timeline
Technical OA	60 minutes
Technical Q1	DSA / Coding
Technical Q2	SQL
Technical Q3	HTML / CSS / JavaScript
Next day — Communication	Verbal Communication → Written Communication for candidates who clear verbal

Timeline: The verbal communication assessment was conducted the **next day** for candidates shortlisted after the technical OA. Candidates who **cleared the verbal assessment** then proceeded to the written communication assessment.

1. Technical Online Assessment — 60 Minutes

The technical OA contained three areas: **DSA/Coding, SQL, and HTML/CSS/JavaScript**. The overall assessment duration was **60 minutes**.

Question 1 — DSA / Coding

Multiplicative Persistence

Given a positive integer **n**, repeatedly multiply all of its digits together to form a new number. Continue this process until the result becomes a single-digit number. The number of multiplication rounds required is called the **multiplicative persistence** of the number.

The task was to **return the smallest number greater than n whose multiplicative persistence is exactly 1**.

Exact examples/test cases remembered:

For **n = 10**: 1 × 0 = 0, so the persistence is 1.
For **n = 27**: 2 × 7 = 14, then 1 × 4 = 4, so the persistence is 2. The next number greater than 27 with persistence 1 is **30**.
For **n = 9**: the next number greater than 9 with persistence 1 is **10**.

A multiplicative-persistence question was also present in another question set within the same assessment process.

Difficulty variation: DSA difficulty could vary across question sets. Some sets contained easy DSA questions, while other sets could contain medium-level questions. The supported coding languages included **Python, C# and Java**.

Question 2 — SQL

An **ER diagram / database schema** was provided rather than a conventional sample-input/sample-output format. The schema contained multiple tables representing a **car-rental system**, including customer, rental, and car-related information.

The task was to identify cars that had **never been rented** and return requested car details such as the **car model, rental rate**, and other relevant attributes.

The solution required understanding the relationships between the tables and could be implemented using a **JOIN with NOT EXISTS**, or an equivalent anti-join approach such as a suitable **LEFT JOIN with IS NULL** condition.

Question 3 — HTML / CSS / JavaScript

Existing **HTML, CSS and JavaScript files** were provided, and the task was to make specific changes according to the requirements in the question.

- **HTML:** make a requested tag/structure change, such as changing a div element to an h2.
- **CSS:** add or modify a style property for an element identified by a class, such as **font-size**.
- **JavaScript:** an addEventListener and function were already present; the required task was to add appropriate **if/else logic** to change innerText according to specified conditions.

2. Next-Day Verbal Communication Assessment

Candidates who were **shortlisted from the technical OA** took the verbal communication assessment **the next day**. The verbal assessment was AI-assisted and focused on speaking, listening, repetition, reading, and comprehension.

- **Sentence reading:** read sentences presented during the assessment.
- **Repeat-after-AI:** listen to an AI voice and repeat the given sentences.
- **Listening comprehension:** listen to/read a paragraph and answer questions based on its content.
- **AI-assisted assessment:** an AI component was used during the communication assessment.

Candidates who **cleared the verbal communication assessment** proceeded to the written communication assessment.

3. Written Communication Assessment

The written communication assessment was conducted **after the verbal assessment** for candidates who cleared the verbal round.

The written component consisted of **one email-writing task** based on the situation or prompt provided in the assessment.

Overall Process Summary

Timeline	Stage	What was assessed
Day 1	Technical OA — 60 min	DSA/Coding + SQL + HTML/CSS/JavaScript
Day 2	Verbal Communication	AI-assisted speaking, repetition, reading/listening and comprehension
Day 2	Written Communication	One professional email — for candidates who cleared verbal
