7. A bag contains 25 white balls and 50 black ones. A

A bag contains 25 white balls and 50 black ones. A separate pile of black ones is also available. The following two-step operation occurs repeatedly: First, we withdraw two balls at random from the bag. Then:
• If both are black, we put one of them back in the bag and throw the other away.
• If one is black and the other white, we put the white one back and throw the black one away.
• If both are white, we throw both away and put a black ball from the pile into the bag.
Because the bag loses a ball at each step, eventually it will contain a single ball. What color is that ball?

Pick **ONE** option

- White
- Black
